

Ideation Phase

Problem Initialization and Planning Phase

Date	30 September 2026
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Define Problem Statements

Create a problem statement to understand the user's point of view while accessing records in ServiceNow. The problem statement focuses on the challenges users face when accessing Institution Details records and the need for controlled record-level access. It helps identify the requirement for restricting records based on user roles and the Branch field, while allowing authorized users and administrators to access the appropriate records. This understanding helps the team design an effective Script-Controlled ACL solution for secure and controlled record access.

Example

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow user accessing Institution Details records	Access only the records that I am authorized to view	I may be able to access records that should be restricted	Record access needs to be controlled based on user roles and the Branch field	Concerned about unauthorized access to records

PS-2	A ServiceNow administrator managing protected Institution Details records	Configure and verify READ, CREATE, WRITE, and DELETE access correctly	Incorrect role assignments or ACL configuration may allow unwanted access or deny valid users	Separate ACL permissions and script-controlled rules are required for each record operation	Concerned about inconsistent access control and data security
------	---	---	---	---	---

Problem Statements Identified

PS-1 focuses on the ServiceNow user's need to access only authorized Institution Details records. PS-2 focuses on the administrator's need to configure and verify role-based ACL permissions so that record operations are controlled consistently.
