Customer Journey Map

Date	30 September 2026
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Customer Journey Map

Map out the ServiceNow user's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings while accessing Institution Details records, along with ACL process ownership and opportunities to improve record access control.

	Stage 1	Stage 2	Stage 3
Stage	Login & Access	Open Institution Details & ACL Check	View / Perform Authorized Operation
Actions What does the customer do?	• Logs in to ServiceNow • Accesses the application	• Opens Institution Details • Selects or searches for records • Attempts to access a record	• Views permitted records • Creates, edits, or deletes records based on assigned role
Touchpoint What part of the service do they interact with?	• ServiceNow Login • Application interface	• Institution Details table • Record list/form • ACL security check	• Record form • New/Edit/Delete options • ACL-controlled access

Customer Thought What is the customer thinking?	• I need to access the Institution Details records.	• Am I authorized to access this record? • Does my role allow me to view this record?	• I should only be able to perform the operations allowed for my role.
Customer Feeling What is the customer feeling?	• Expecting secure access	• Concerned about unauthorized access • Secure when access is properly controlled	• Confident when authorized operations are available • Secure when restricted operations are blocked
Process Ownership Who is in the lead on this?	• ServiceNow • System Administrator	• ACL configuration • System Administrator	• ACL configuration • System Administrator
Opportunities How can we improve this stage?	• Provide controlled application access	• Restrict records based on role and Branch value • Allow administrators full access	• Apply separate ACLs for Read, Create, Write and Delete • Clearly control unauthorized operations
